

2. Suppose you have created a bug fix on a new branch and want it to become part of the next production build generated from the `main` branch. What should you do next?

- ☐ Copy your branch changes and commit them directly to the `main` branch.
- ☒ Create a pull request to merge your new branch into the `main` branch. ✓

Pull requests are the correct way to communicate that commits are ready for review and

3. Suppose you'd like to contribute to the project. What can you do to contribute?

- ☐ Fork the repository to your local machine.
- ☒ Make a pull request to the repository.

Git repositories are used to track changes in your code. Pull requests are used to get your changes into the target repository.
